

# ASK OUR TEAM ABOUT

Your comprehensive options for leading-edge surgical care.

Every surgical procedure at Pottstown Hospital is designed to get you back to your life faster and healthier. That's why our team of fellowship trained, board certified surgeons offer the latest, state-of-the-art techniques and technologies to care for a wide range of conditions and illnesses. And, with a variety of general surgery services including vascular catheter access, tissue and breast biopsy, as well as skin and soft tissue surgery, you can rely on Pottstown Hospital for excellence in every form of surgical care. Our **minimally invasive, laparoscopic surgical services** include:

- **Appendectomy:** Minimally invasive appendix removal — most commonly performed to treat appendicitis — resulting in faster recovery times, less pain, and minimal scarring
- **Cholecystectomy:** Gallbladder removal — typically performed on a same-day basis — to relieve gallbladder inflammation, pain in the upper right side or middle of the abdomen, discomfort from gallstones (small, hardened deposits), nausea, and jaundice
- **Colon resection:** Allows our surgeons to treat or prevent colon cancer, lesions, and diverticulitis through tiny incisions, helping you return to a solid-food diet, improve bowel function, and get you back to your life pain-free
- **Feeding access placement:** Performed endoscopically or laparoscopically to insert a small tube ensuring you receive a healthy amount of nutrients and fluids
- **Gastrointestinal (GI) Surgery:** Cutting-edge techniques relieving reflux disorders, dysphagia, and hiatal hernias to keep your digestive tract functioning properly
- **Peritoneal Dialysis Catheter Placement:** Our surgeons insert a small, thin, and flexible tube to improve kidney function for better mobility, enhanced simplicity of use, and other long-term advantages
- **Small bowel resections:** Removes blockages in the small intestine through tiny incisions in the belly, improving your body's ability to break down and absorb nutrients from food
- **Splenectomy:** State-of-the-art spleen removal to strengthen your body's immune system

In addition to our minimally invasive alternatives, we also offer options for every type of hernia repair including:

- **Inguinal hernia repair:** Typically occurs in the abdomen near the groin area — available on an outpatient basis
- **Incisional hernia repair:** Which develops at the site of a previous surgery (typically near the abdomen)
- **Complex open and repeat surgeries:** Including abdominal wall reconstruction

From surgical treatments to follow-up care, our team is available to answer any questions and provide additional support **24 hours a day, seven days a week.**
