

# BPCI-A Program Overview

## Calculation of Program Savings

To determine program savings, CMS subtracts actual Medicare FFS expenditures from the TP, which results in either a **positive or negative Net Payment Reconciliation Amount (NPRA)**. Then CMS will apply a 20% stop-gain/stop-loss provision to the NPRA. A participant may only earn up to 20% of its target spending if savings are achieved.

### Stop-Gain Applied to Total Savings (NPRA)

# III. BPCI-A: CET Updates

## Funds Flow

The \$2 million in savings (includes the amount adjusted for (1) quality performance, up to 10%, and (2) a stop-gain provision) generated under BPCI-A will be shared among eligible physicians, TH hospitals, and THP for savings accrued.
