Fax: 484-628-9500

Michael Haas, MD

Colin Murphy, MD

Adam Smith, MD

Office Hours

Monday to Friday:
7 a.m. to 4:30 p.m.

Practice Focus

Using cutting-edge technology, the radiation oncologists of Berks Radiation Oncology Associates, PC (BROA), develop treatment plans that precisely treat malignant and benign conditions, while sparing normal tissue. This decreases unwanted side effects and allows the maximum effective dose to be delivered.

The physicians at BROA are key members of the multidisciplinary oncology teams at McGlinn Cancer Institute. Treatment details are formulated, conforming to evidence-based standards and National Comprehensive Cancer Network (NCCN) guidelines. Stereotactic radiosurgery in the brain and spine, and stereotactic body radiation therapy to the lungs, liver and other isolated sites, allow for fewer treatment sessions and submillimeter precision.

In addition to external beam radiation, we specialize in the use of internal radiation known as brachytherapy. We work with our surgical and interventional radiology colleagues to deliver GYN implants and radioembolization of the liver, among other sites.

While our practice is primarily focused on the treatment of malignancy we also offer expertise in non-cancerous conditions including Grave's ophthalmopathy, meningiomas, trigeminal neuralgia, keloids and heterotopic bone prophylaxis.

Referrals

Routine referrals can be placed in EPIC. Non-EPIC providers can refer a patient by calling our office at 484-628-8067 or faxing our office at 484-628-9500. We are always happy to discuss patients in advance of the formal consultation request.
