### Office Hours

Monday to Thursday, 9 a.m. to 5 p.m. | Friday, 9 a.m. to 3 p.m.

## PRACTICE FOCUS

The Center for Urologic Care of Berks County, the largest urological practice in Berks County, is dedicated to serving the greater Berks County region. Our board-certified urologists offer state-of-the-art diagnosis and treatment to men, women and children, assisted by our on-site CLIA certified laboratory and accredited pathology lab. We emphasize discretion and compassion in all patient interactions. The dedicated team supports our patients' clinical needs in the office, as well as at the hospital to ensure a continuum of care. We provide treatment for most urological conditions, including the following:

**Urologic Oncology:** expertly trained in minimally-invasive (laparoscopic and da Vinci® robotic) surgery for cancers of the prostate, kidney, bladder and testis

**Stone Disease:** complete medical and surgical management of kidney stone patients, including endoscopic, percutaneous and non-invasive shock-wave lithotripsy (ESWL) using state-of-the-art technology

**Male Voiding Dysfunction:** wide range of therapies for BPH/enlarged prostate, including medical options, transurethral surgical resection and laser ablation (GreenLight), and less-invasive options such as prostatic urethral lift (UroLift)

**Incontinence and Overactive Bladder:** multidisciplinary approach to improve quality of life for men and women who suffer from incontinence. Therapies offered include medication, behavioral modification, BOTOX® injections, sacral neuromodulation (InterStim), percutaneous tibial nerve stimulation and urethral sling or artificial sphincter surgical implants

**Pediatric Urology:** evaluation and treatment for the most common urologic problems that affect children, including vesicoureteral reflux, hypospadias, ureteropelvic junction obstruction and other acquired or congenital conditions

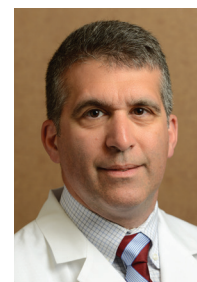

**Infertility:** multidisciplinary evaluation of male-factor infertility, sperm retrieval, varicocele repair, testicular biopsy and vasectomy reversal.

**Male Sexual Health:** comprehensive and evidence-based approach for men suffering from erectile dysfunction and low testosterone

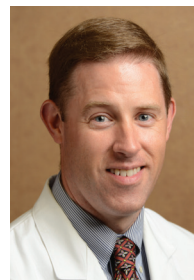

**General Urology:** evaluation and treatment for all general urologic conditions, including vasectomy, management of interstitial cystitis/chronic pelvic pain, urinary tract infections and the evaluation of blood in the urine

John Henry,  
MD, FACS

Constantine Harris,  
MD, FACS

Shawn White,  
MD, FACS

James Monath,  
MD, FACS
